

Assignment 4.2 – Managing Citations with RMarkdown

Create an R Markdown document that outputs either an HTML or DOC file.

1. Go to Google Scholar and search for your favorite animal. Be sure to note the search terms you use. Download the citations for the first five **peer-reviewed journal articles** that Google Scholar returns and save them to a .bib file.
2. Reference each article in a list using code for citing articles with RMarkdown. Give a short (one or two sentences) about each reference. Ensure that there is a successful bibliography at the end of the HTML or DOC file referencing all five articles with full citations.
3. Make sure your references are formatted in the style of *Nature Genetics*.

Turn in your RMD and Bib files.
